MOLECULAR TEST REQUESTED (obligatory field)

Evaluation of molecular risk markers for arterial hypertension
Evaluation of genetic variants that can be considered molecular risk markers predisposing for arterial hypertension, in particular genetic variants that are related with:

1) the renin-angiotensin-aldosterone system ☐
2) the vascular endothelial dysfunction ☐
3) a renal tubule ☐
4) autonomous nervous system ☐
5) mendelian diseases that are known to cause arterial hypertension ☐
6) Single nucleotide polymorphisms /SNPs ☐
- Evaluation of 80 molecular risk markers in the 45 genes associated with the referred above systems 1-6 ☐
